## Swiss-Ghanaian Intellectual Property Project, Phase II (SGIP II)

*The objective of the SGIP II project is to strengthen the use of intellectual property rights in Ghana in order to contribute to higher competitiveness, more value added to Ghanaian products, and a positive impact on Ghana's economic development.*

### Project Background and Context

Cooperation between Ghana and Switzerland in the field of intellectual property rights (IPRs) started in early 2009 with the launch of the Swiss-Ghana Intellectual Property Project (SGIP I).

Comprehensive policy advice, mainly provided through a National IP Policy Committee, contributed significantly to an enabling legal framework on IPRs, including the revision of the main laws on IPRs.

The Government of Ghana, based upon the achievements of SGIP I, expressed a strong desire to benefit from further Swiss support to consolidate and to build upon the positive results. While Ghana's legal and institutional framework in the field of IPRs is well developed, challenges remain. As in many other developing countries, institutional constraints continue to impede the effective enforcement of IPRs. Furthermore, right holders have not yet fully exploited the potential of these rights. Both of these challenges are in part the result of limited public awareness on IPRs.

Promoting the use of those types of IPRs, which would allow Ghana to capitalize on its internal strengths, is of particular interest to the Government of Ghana.

*One of the activities of SGIP II is strengthening the general knowledge of research institutions on IPRs and their importance for innovation.*

### Quick Project Facts

#### Project Duration

January 2016 – December 2019

#### Total Budget

1,400,000 CHF

#### Donor Agency

Swiss State Secretariat for Economic Affairs – SECO

#### Implementing Partners

Swiss Federal Institute of Intellectual Property – IPI  
 Ministry of Trade and Industry - MoTI  
 Ministry of Justice - MoJ

#### Country Context Ghana

Population: 26 million  
 Area: 238,533 km<sup>2</sup>  
 Annual GDP growth: 4.0% (2014)  
 Annual income per capita: 4,100 USD (2014)

### Goals and Objectives

Selected goals and objectives of high relevance to Ghana to be achieved by SGIP II include:

- An enabling IP environment is in place and improved services are provided to IP users.
- Research institutions and SMEs increasingly commercialize their IPRs.
- The protection and enforcement of IPRs is improved for the higher economic benefits of right holders and for safeguarding consumers against substandard goods.
- Legal protection and market access of high quality agricultural products and handicraft products are improved of traditional products, to the benefit of rural and artisanal communities.

## Activities

Considering the relatively advanced stage of Ghana's system of IPRs, this niche approach of the SGIP II project of "filling specific gaps" adds the most value and thus seems to be the best strategy to achieve sustainable results.

SGIP II provides the opportunity to **consolidate, broaden and deepen results achieved by SGIP I**. The continuation of support – with a shifted focus to the practical implementation of the newly established policy framework – will translate prior achievements into tangible, sustainable outcomes that directly benefit key stakeholders. Within selected thematic areas, the activities mainly consist of **technical capacity building through trainings, workshops, education programmes and expert input**, to be led by national or international consultants. These activities **increase the capacity** of relevant IP-related organisations in delivering professional services. Furthermore, SGIP II envisages to support the pilot registration of selected GI products, which will be determined during the implementation of the project. The registration of these local specialty products as GIs is expected to **increase the income of local producers**.

## Alignment with the general development priorities of Ghana

A strong IPR protection becomes increasingly important for Ghana's ability to attract investments in modern technologies, which are needed to **improve the quality of and add value to local products**. Ghana has a large capacity in establishing new brands, e.g., for the export of fruits, cacao beans, coffee, and shea butter. Higher **competitiveness** and **more value added** to these and other products are expected to result in a positive impact on the country's socio-economic development. A strong and **well-balanced IPR system** encourages technology transfer, **research and development**, and the building of strong local brands, which are crucial to increase the international competitiveness of Ghanaian companies. Better protection and **use of geographical indications**, to market local specialties, benefit especially rural areas and enable Ghana to leverage its internal strengths and to enable a more balanced growth. The protection of geographical indications as well as the better enforcement of other forms of IPRs in Ghana would contribute to the safeguarding of the rich cultural **tradition and heritage of the country**.

## Beneficiaries

The main beneficiaries of SGIP II are the Industrial Property Offices at the Registrar General's Department (RGD), and the Copyright Office under the Ministry of Justice and the Attorney General's Department (MoJ). Both will benefit through direct technical capacity building. Additionally, **local small and medium enterprises (SMEs) and relevant associations** benefit from tailor-made workshops and trainings, while other economic actors as well as the wider Ghanaian public benefit indirectly through improved services of the RGD, and the improved quality and **competitiveness of Ghanaian products**. The impact of SGIP II also extends to the more vulnerable segments of the Ghanaian population, such as rural communities, mainly through the use of geographical indications to market local specialties.

*Ghana is proud of its traditional textile with unique ornaments. The traditional production is threatened by pirated products. The Project trains customs and police officials in enhancing enforcement of IPRs.*

*Ghana's potential for using GIs to add value to agricultural products is high. The project supports pilot registration of selected products.*

*Research institutes are advised how to establish a proper mechanism to protect and commercialize their IPRs through different instruments (licensing, spin-offs, joint-ventures, etc).*
