Help in developing an IP strategy

We recommend contacting specialists both inside and outside your company to help you define and implement your protection strategy:

- **Trade mark experts, patent attorneys** and company consultants who are familiar with intangible assets can help you define your strategy.

- Experts in other countries can help you evaluate your intellectual property there (in your research, production and sales markets abroad), and they can intervene for you on-site if necessary.

- **Lawyers** can help you enforce your rights.

You can find a detailed list of services that we recommend especially for SMEs under Help for SMEs.
